

FoodSphere

One App · Seven Unique Dining Experiences

Unified Restaurant Aggregator Platform + 7 Individual Websites

Executive Summary

We propose to develop a single mobile application that aggregates seven restaurants — seenbanao, dineatblue, jushhpk, tandooristoppk, sandmelts, birdmanfoodspk, and getafomo — under one seamless platform. Each restaurant will showcase its unique cuisines and services, and accept Cash on Delivery (COD) orders. Additionally, each restaurant will receive its own separate, fully responsive website. The backend is built on Python Django REST Framework, the mobile app on React Native / Flutter, and websites on React.js + Tailwind CSS.

Project Scope

Phase 1 — Mobile App (Unified Platform)

- One app listing all 7 restaurants with individual profiles.
- Available on both Android (Google Play Store) and iOS (Apple App Store).
- Menu with prices, cuisine info, delivery timings and services.
- Cart & order placement system with Cash on Delivery (COD).
- Online payment integration via Stripe and PayFast (credit/debit cards supported).
- Basic order tracking: received → preparing → out for delivery → delivered.
- Push notifications for order updates.
- User login/register — guest ordering supported.
- Restaurant search, filter by cuisine, dish, or restaurant name.
- Loyalty Points System: earn points on every order, redeem for discounts.

Phase 2 — Backend (Django REST Framework)

- Separate admin panel per restaurant owner: manage menu, prices, availability.
- View incoming orders and update order status.
- Super-admin dashboard to manage all 7 restaurants.
- RESTful API endpoints for the mobile app.
- Database for users, orders, menus, and restaurants.

Phase 3 — 7 Individual Websites

- Each restaurant gets its own fully responsive branded website.
- Built with React.js + Tailwind CSS.
- Static + contact form (Formsprees or similar — no backend required).
- Hosted on Netlify / Vercel.

Phase 4 — Deployment

- Android app published on Google Play Store.
- iOS app published on Apple App Store.
- Websites hosted on server.
- Backend deployed on AWS / Heroku / VPS.

7 Restaurant Websites — Individual Requirements

1. seenbanao — Desi BBQ & handi items, delivery timing, location map, COD order form
2. dineatblue — Seafood specialty menu, reservation inquiry, contact form
3. jushhpk — Fast food & burgers menu, combo deals, working hours
4. tandooristoppk — Tandoori items, naan/roti counter, gallery, phone order option
5. sandmelts — Sandwiches, melts & shakes menu, nutrition info
6. birdmanfoodspk — Grilled & fried chicken, catering inquiry
7. getafomo — Trendy café items, Instagram feed integration, event booking

Technical Stack Summary

Backend: Python · Django · Django REST Framework

Mobile App: React Native or Flutter

Platforms: Android + iOS

Websites: React.js + Tailwind CSS

Database: PostgreSQL / SQLite

Authentication: JWT Tokens

Payment: Stripe + PayFast · COD

Version Control: Git + GitHub

Deliverables

- Android App package ready for Google Play Store
- iOS App package ready for Apple App Store + TestFlight beta
- Payment Integration fully integrated with order flow
- Loyalty Points System
- Admin Panel for restaurant owners + super-admin
- 7 Websites live on client's domain/subdomain
- Full GitHub repository access
- Documentation guide for managing orders & menu items

Terms & Conditions

- Website hosting and domain names are not included in this proposal.
- Revisions: 2 rounds free per website / app screen; additional revisions are chargeable.

Thank you for considering this proposal.
